

**NEET<sup>®</sup>SHEETS is the only patented elastic-free ergonomic bedding system engineered to reduce hotel housekeeping staff injuries, accelerate room turns, and strengthen staff retention across high-volume properties. It introduces a new category of bedding that replaces outdated, labor-intensive methods and eliminates the physical strain, inefficiency, and constant mattress lifting built into traditional bed making.**

**NEET<sup>®</sup>SHEETS is designed for hospitality environments where room turns, consistency, and staff well-being directly influence guest experience and labor cost. The system aligns with widely recognized ergonomic principles OSHA highlights for reducing strain in manual tasks and supports efforts to lower operational, labor, and injury-related costs across entire hospitality organizations.**

### **Why It Matters**

Repetitive mattress lifting is a leading driver of strain, turnover, and lost time injuries • Causes workers' compensation exposure, premium increases, and labor instability • Slows room turns and disrupts room readiness reliability • NEET<sup>®</sup>SHEETS reduces strain, lowers injury risk, and stabilizes labor

### **OSHA Alignment**

Supports ergonomic principles OSHA highlights, including repetitive lifting, awkward postures, and forceful exertion • Alignment with ergonomic principles, not endorsement • Reduces physical effort and strain in manual tasks • Helps organizations reduce exposure to injury related costs

### **How It Works**

Traditional sheets rely on elastic that forces repeated lifting and deep tucking • Traditional layers shift, and require forceful adjustments • Patented corner pull system eliminates elastic entirely • Less tucking and fewer adjustments while bedding stays aligned • Standardized steps across all staff and all mattress types • Engineered for industrial laundering and high turnover operations

### **Independent University Results**

75 percent less mattress lifting effort • 47 percent faster bed making • 53 percent productivity increase • Significant reduction in musculoskeletal strain

### **Operational Impact**

Faster and more consistent room turns that directly improve operational ROI • Less strain on shoulders, wrists, and lower back, reducing injury related costs • Lower workers' compensation exposure and fewer claim driven premium increases • Higher productivity across housekeeping teams, improving labor efficiency ROI • More reliable room readiness that protects revenue and guest satisfaction • Reduced absenteeism and turnover, lowering replacement and training costs

### **Workers' Compensation and Cost Exposure**

Mattress lifting injuries create expensive claims and wage replacement costs • Higher claim frequency increases premiums • Overtime and temporary labor required when staff are injured • Injury history affects premiums for multiple years • Reducing strain reduces long term exposure

### **Guest Experience Advantages**

Crisp, clean, uniform presentation • Bedding stays in place without shifting • No restrictive tucking for guests • Aligned layers

### **Engineered for Hospitality**

Built for high volume turnover and industrial laundering • Consistent performance across multi property portfolios • Customizable to brand standards for fabric, hand feel, durability, color, and configuration • Maintains structure and performance through heavy use

### **System Components**

Fitted NEET®SHEET • Fitted NEET®SHEET 2.0 • Top/Flat NEET®SHEET • Decorative NEET®SHEET • NEET® Thermal Blanket • NEET® Comforter • Crinkle NEET®SHEET • Universal NEET®SHEET

### **Who We Serve**

Hotels and hotel chains • Resorts and all inclusive properties • Boutique and luxury hotels • Conference centers and casino hotels • Extended stay and lifestyle hotels • Independent hotels and soft brand collections • Vacation properties • All high turnover hospitality environments

### **Mattress Compatibility**

Works on any mattress type used on king or queen beds, including pillow top, firm, plush, foam, hybrid, encased, platform, low profile, and high profile constructions.
